Manono Tailings Project on Track

The MSA representative was at the site in May and all is on schedule to receive the planned MRE within the three-month window. The drill holes were verified and random reserve samples taken for confirmatory test work by MSA. The 9 metric ton sample has also reached Coremet in South Africa so we can expect to receive initial results from the test work in due course. As the Dumps K and G are showing the most promising results with assays as high as 1.2% Li2O, the team have decided to do further drilling on these dumps to bring the resource of dumps K and G into measured and pushing towards release of a Preliminary Economic Assessment (PEA) for October 2022.

Interest in Tantalex Lithium Grows

Initial discussions with potential end users are bearing fruit, and Tantalex will be in an ever better position, as the company delivers on its milestones that are planned for 2022. The additional drilling on Dumps K and G together with the Metallurgical testwork from Coremet and the Mineral Resource estimate within the next three months will set the stage for a positive PEA by October, followed by a PFS for Q1 2023.

The first production from the Lubule Project of tin and tantalum concentrates will set us up for near-term production and positive cash flow by year end as well. This, together with the expectation of positive results from the initial drilling campaign on the Pegmatite Corridor, has seen Tantalex receive a lot of interest from investors and the battery metals industry.

Pegmatite Corridor Drill Plan Defined

Following the approval by the board for the investment into the first phase of drilling on the Pegmatite corridor, the three initial drill targets have been defined and contract confirmed with the drilling company starting on the 25th of May.

It is planned to complete 8000 meters of R/C and 9000 meters of Diamond drilling across the three targets. The geochemistry work done to date is proving promising and has greatly de-risked our planned investment of the drilling in the Pegmatite Corridor.
Tantalex Well Received at the 2022 Mining Indaba in Cape Town

The team had its first real taste of marketing the project at the 121, The Investor Battelfields (where Tantalex was a finalist), The Benchmark Minerals Event and our private event, hosted by Invest Africa, in Cape Town. Positive responses all around and of course everyone after our Lithium! We will be back next year, bigger, better, stronger!

First Medical Operations in Manono a Success

Upright Africa, funded by Tantalex and supported by Coproco Group SARL, under the guidance of Dr. John Woods and his team, have completed their first campaign in Manono. The team, consisting of Surgeon – Dr. Alain Muka, Gynecologist – Dr. Patrick Murhula, Dr. Morisho, Anesthesia Chief – Jean Claude Bahane, Dr. Aaron and local doctors and nurses, completed four days of surgery on 74 patients, totaling in all 87 operations. We are thankful for all the work done for the improvement of the community and a second campaign is planned for September/October.
