TiTan Tin and Tantalum Project gets the go ahead...

Tantalex Lithium Resources Corp have recently received the Mining Licence for the TiTan Tin and Tantalum project. This means full steam ahead with setting up the concentration plant and aiming for the production of its first concentrate in March 2023. What this means for the company is near term cash flow with the plan to take advantage of the position Tin finds itself in the new energy transition. As the metal known as the “glue” that keeps everything together, the timing couldn’t be better.

At current prices it would be an initial yearly revenue stream of \$24Mio and with the low cost operation an immediate addition of net profits. This will allow the reinvestment into exploration and development without the risk of diluting shareholder value.

Tantalum concentrates, used in everything from cell phones to TVs, has a market structure that will place Tantalex Lithium Resources Corp as an important supplier of this critical metal.

The company envisages having more of these plants in the region within the coming years.

The planned production will be 1400mt of Tin concentrate and 220mt of Tantalum concentrate per year.

Novopro appointed for the PEA for the Manono Tailings Project

Tantalex Lithium Resources Corp have appointed Novopro Project Development and Management (<https://novopro.ca/index.php>) to push on with our Pre-Economic Assessment targeted to be complete in early January 2023. With a strong management team, led by Mr Mazie Rejaee with over 35 years of experience related to engineering and development and has led multiple projects from development to implementation, Tantalex Lithium Resources are in good hands.

Maiden Mineral Resource Estimate due out soon

We are days away from receiving the Maiden Mineral Resource Estimate from MSA and this will be the first of many updates around the mineral resource potential that Tantalex Lithium Resources have under their umbrella of projects in the DRC.

The Pegmatite Corridor Drilling starts...

The first phase of our drilling campaign on the pegmatite corridor has started in November and this will carry on for a period of 9-12 months. We plan an initial 8,000m of R/C drilling, followed by 9,000m of diamond drilling. So all we can ask of our readers for now on this is to watch this space...

Interest in Tantalex Lithium Resources Corp is mounting

Tantalex Lithium Resources have been in discussion with multiple Tier 1 companies in the mining and Lithium space as the interest around the projects increases. The management team have given access to the Data Room to companies and will be requesting their firm expressions of interest by the end of 2022. Two of these companies have already had sight visits with positive feedback from both.
